Clamping Issues?

Resolve all your clamping issues with our unique Lenzkes Clamping Tools services. Try our products absolutely free of charge and without obligation to purchase in Europe and North America.

Make the most of Lenzkes!

Due to their unique stepless horizontal and vertical adjustability, Lenzkes products are used in the plastics industry on injection moulding machines, in metal fabrication, on drilling and milling machines as well as machining centres.

Lenzkes products are also perfect to use on metal forming and stamping presses. Pressure die casting machines also pose no problem due to their immense clamping force.

Quality through consistency and innovative developments

In 1976 Karl-Heinz Lenzkes founded the company with the goal of improving productivity and reducing setup times in manufacturing.

The first generation clamps (S10/20) were improved upon in the early 1980s (S30/40). These were further enhanced by a unique extension block system (B50) allowing greater clamping heights.

In the late 1980s Karl-Heinz Lenzkes added a variety of side clamps (NU/FL/SK/SKO) for free surface machining.

In the 1990s Karl-Heinz patented the first stepless horizontally and vertically adjustable MQ-Series Clamps (MQ60/70), which were a revolution in mechanical clamping at that time.

Another milestone in the company's history was the invention of the integrated sliding plate (MQ100). Further innovations (MQ106/110/130/150/160/200) helped Lenzkes to become the market leader in mechanical clamping systems.

Between 1989 and 2013, in order to keep up with the ever increasing demand for Lenzkes clamps, the company opened facilities in Great Britain, Spain, USA, Switzerland, France, Poland and Turkey.

The company is ISO 9001 and 14001 certified. Lenzkes represents the highest quality in clamping systems. Approximately 150 experienced employees worldwide are constantly helping over 100,000 customers with their clamping needs.

Get Lenzkes on board so you can relax!

Quality for all applications

- Designed by engineers for engineers
- Greatly adjustable clamps for many varied applications
- Assistance in your own language
- Free trial*
- Shipping within 24 hours
- 6 years warranty on clamping shoe and arm

* Free of charge testing of our clamping tools is available only in countries that are members of the European Union and in countries where we have a branch office based.

Multi-Quick – the small strong one's! MO 60/ 100/ 134 Series 8

MO 60 Series 8 has a clamping force of up to 24 kN.
MO 100 Series 8 has a clamping force of up to 22 kN.
These stepless vertically and horizontally adjustable clamps provide large clamping forces via a low torque setting.

MQ 134 Series 8 has a clamping force of up to 20kN. These steplessly adjustable two tier clamps provide large clamping forces via a low torque setting. High clamping range easily obtained via two adjusting levels.

Multi-Quick
MO 60 Series 8 (complete)

Application Examples:
Light metal cutting

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque

Clamping Force: **Up to 24 kN**

- **Material: Hardened alloy steel**
- **Clamping arm/Clamping shoe: Drop forged**

Multi-Quick – The route to flexible clamping MQ 60 – 70

MQ 60 has a clamping force up to 90 kN.
Stepless vertical and horizontal adjustment.

MQ 70 has a clamping force up to 50 kN.
Increased stepless vertical and horizontal adjustment.

- The MO Series is stepless vertically and horizontally adjustable at any angle on the machine table.
- The clamping shoes can be used as an extension to the machine table.

Multi-Quick
MO 60 (complete)

Application Examples:
Metal forming, heavy duty metal cutting and pressure die casting

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque

Clamping Force: **Up to 55 kN**

- **Material: Hardened alloy steel**
- **Clamping Arm: Drop forged**

Multi-Quick
MO 65 (complete)

Application Examples:
Metal forming, heavy duty metal cutting and pressure die casting

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque
- greater horizontal and vertical reach than MO60

Clamping Force: **Up to 80 kN**

- **Material: Hardened alloy steel**
- **Clamping Arm: Drop forged**

MO 60S (complete)

Clamping Force: **Up to 100 kN**

Application Examples:
Metal forming, heavy duty metal cutting and pressure die casting

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque
- stronger Design Forged Clamping Shoe and Clamping Arm
- up to 40% higher clamping force than our MO60 is achieved, by redesign and reposition of the pivot point
- Fixing bolts now come with a larger head
- flatter designed forged clamping shoe

Multi-Quick – Flexible clamping solutions

MQ 100 – 134

MQ 100 has a clamping force up to 60 kN.

MQ 110 has a clamping force up to 40 kN.

MQ 130 has a clamping force up to 35 kN.

These clamps offer a greater stepless adjustment, both vertically and horizontally. This is in part due to the integrated sliding plate.

MQ 106 has a clamping force up to 60 kN.

MQ 134 has a clamping force up to 40 kN.

Even greater stepless horizontal adjustment due to elongated slot in clamping shoe.

Multi-Quick
MO 100 (complete)

Application Examples:
Injection moulding, metal cuttings and metal forming

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque
- greater horizontal adjustment due to the integrated sliding plate

Clamping Force: **Up to 60 kN**

- **Material: Hardened alloy steel**
- **Clamping Arm: Drop forged**

Multi-Quick
MO 100S (complete)

Clamping Force: **Up to 90 kN**

Application Examples:

Injection moulding, heavy duty metal cutting and metal forming

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque
- greater horizontal adjustment due to the integrated sliding plate
- stronger design forged Clamping Shoe and Clamping Arm
- up to 50% higher clamping force than our MO 100 and MO 106 is achieved, by redesign and reposition of the pivot on the sliding plate
- Fixing bolts now come with a larger head
- flatter designed forged clamping shoe

- **Material: Hardened alloy steel**
- **Clamping arm/Clamping shoe: Drop forged**

MO 130 (complete)

Application Examples: Light metal cutting

- protected Trademark Multi Quick
- stepless vertically and horizontally adjustable
- strong clamping pressure for small clamping torque
- greater horizontal adjustment due to the integrated sliding plate
- increased clamping heights due to the three level clamping shoe

Clamping Force: **Up to 35 kN**

Multi-Quick – Flexible clamping solutions

MQ 150 – 200

MQ 150/160 has a clamping force up to 40 kN. These clamps offer exceptional stepless, vertical and horizontal, adjustment. The horizontal Profile Nut (only MQ 160) increases the stepless horizontal adjustment.

MQ 200 has a clamping force up to 60 kN. These clamps offer, due to the integrated sliding plate and the two level clamping shoe, even more vertical and horizontal adjustment. The horizontal Profile Nut increases the stepless horizontal adjustment.

Multi-Quick
MO 150 (complete)

Clamping Force: **Up to 40 kN**

Application Examples:
Metal cutting

- patented within the European Union
- strong clamping pressure for small clamping torque
- great stepless vertical and horizontal adjustment

- **Material: Hardened alloy steel**
- **Clamping Arm: Drop forged**

Clamping Frames – Flexible clamping solutions S 10/S 33

S 10 and S 20 have a clamping force up to 70 kN. These clamps offer great stepless vertical adjustment. The S 20's are used when protruding bolts are obstructive.

S 33 and S 45 have a clamping force up to 70 kN. These clamps are adjustable both vertically and horizontally due to the unique grooved frame design and can clamp up to 260 mm high. The S 45's are used when protruding bolts are obstructive.

- stepless vertically adjustable
- S 20: No protruding bolts
- very high clamping forces

Clamping Frames S10 – S 20 (complete)

Clamping Force: **Up to 45 kN**

- **Material: Hardened alloy steel**
- **Clamping frame: Drop forged**

Clamping Frames

S33 – S45 (complete)

Application Examples:
Injection moulding, metal forming and metal cutting

- adjustable both vertically and horizontally due to the unique grooved frame design
- S45: No protruding bolts

Clamping Force: **Up to 55 kN**

- **Material:** Hardened alloy steel, for higher clamping force
- **Clamping Frames:** Drop forged

Clamping Frames S33–S45 (complete)

Clamping Force: **Up to 60 kN**

Application Examples: Injection moulding, metal forming and metal cutting

- adjustable both vertically and horizontally due to the unique grooved frame design
- greater clamping force than S30 or S40
- S45: No protruding bolts

- **Material: Hardened alloy steel, for higher clamping force**
- **Clamping Frames: Drop forged**

Extension Blocks – Overcoming various clamping heights B50/A58

B50 has a holding force up to 60 kN.
The Extension Blocks made from extra strong aluminium alloy are an ideal addition to the MQ-Series clamps. They are generally used for pressing, stamping, milling and drilling.

A58 has a holding force up to 80 kN.
The Extension Blocks made from steel are a versatile addition to the MQ-Series clamps. They are generally used for injection moulding, pressing, stamping, milling and drilling up to 1,000 mm.

Extension Blocks B 50 (complete)

■ An ideal addition to the MO-Series clamps for increased clamping heights

Holding Force: **Up to 60 kN**

■ Material: Aluminium alloy

■ Long style

Extension Blocks A 58 (complete)

- patented in DE
- an ideal addition to the MQ-Series clamps for great clamping heights
- safer working heights achievable by securing directly into the machine table due to unique design of the block

Holding Force: **Up to 80 kN**

- **Material:** Hardened alloy steel
- **Connecting element:** Drop forged, Tempered steel
- **Clamping Rod:** Hardness class 10.9

Chain Clamps – for securely clamping large workpieces

Chain clamps have a holding force of up to 60kN. The chain clamp flexibility allows for large and bulky workpieces to be uniformly secured via low torque setting.

The chain tensioner is very easy to adjust increasing productivity by reducing setup times.

Workpiece protection upon
customer request

Chain Clamps with adjustable chain holder

Clamping Force: **Up to 60 kN**

199-... Can be used parallel and at any angle on the machine table

Pad and prisms guide strips available upon request

Application Examples: Machining and large fabrications

- protected as a registered design in Germany
- for cylindrical work pieces, valve bodies, pump housings, pistons etc.
- the easiest, fastest and safest way to hold round and unconventional work pieces securely in place

- **Material: Hardened alloy steel**
- **Clamping Arm: Drop forged**
- **High Performance Roller-Chain**

- high clamping force achieved via low torque requirements
- high chain adjustability via inovative chain holder
- easy installation and easy adjustment through stepless adjustable MQ-Clamps
- Suitable for T slots, Tapped holes and fixture use
- Increased angle setting adujstability of 120° – 180°

Side Clamps NU/FL/SK/SKO

NU has a clamping force up to 18 kN.
These side clamps are perfect for low profile free surface machining. They are generally used on milling machines in metal cutting.

FL has a clamping force up to 40 kN.
These side clamps are perfect for low profile free surface machining. They are generally used on milling machines in metal cutting.

SK/SKO has a clamping force up to 65 kN.
These side clamps are ideal for free surface machining and generate great clamping force. The SKO can be used at an angle to the T-Slot or parallel to the T-Slot. They are generally used on milling machines in metal cutting.

Self Centering Clamp has a clamping force up to 25 kN.
These self centering clamps are stepless adjustable.
Base plate with centered tapped hole.

Application Examples:
Metal cutting

- for free surface machining
- for low profile workpieces

Side Clamps
NU 10 (complete)

■ **Material: Hardened alloy steel**

Clamping Force: Up to 18 kN

Side Clamp with Fixing Screw

Can be combined with positioning stops page 88-91

Side Clamps FL10 (complete)

Application Examples: Metal cutting

- for free surface machining
- low profile side clamp
- Alloy steel increases life span of the clamp

Clamping Force: **Up to 40 kN**

Side Clamp with with Fixing set

Can be combined with positioning stops page 88–91

- Material: Hardened alloy steel
- Set-up time is considerably reduced due to long T-Nut
- new design generates increased clamping force

- Material: Drop forged alloy steel
- also available with long form T nut to reduce surface area tension within the T-slot and dissipate clamping force

Side Clamps with elongated slot SK10 (Spare Parts)

Can be combined with positioning stops page 88–91

Side Clamps inclined fixing SKQ 10 (complete)

Application Examples: Metal cutting

- for free surface machining
- can be used parallel and at any angle on the machine table
- drop forged alloy steel increases life span of the clamp

Clamping Force: **Up to 65 kN**

**Application Examples:
Machine shops and Tool rooms**

- quick and easy to use
- more accurate positioning of the workpiece
- for low profile or high work
- Positioning stops are used inline or at a 90° angle to the T-Slot of the machine table

**4-way Positioning stops – greater flexibility
for Side Clamps**

**Positioning Stops used in conjunction with
Side Clamps FL 10**

**Positioning stop in side-clamping
function against locating surface**

**Positioning stop 90° angled against
locating surface**

**Positioning Stops used in conjunction with
Side Clamps SKQ 10**

**Positioning stop in side-clamping
function against locating point**

**Positioning stop in raised function
90° angled against locating surface**

- Material: Hardened alloy steel
- Rhombus t-nut available to speed set up of clamp
- Also available as special orders for tapped machine tables

4-way Positioning stops for Side Clamps

Self Centering Clamps (complete)

Application Examples: Metal cutting

- self centering
- centering accuracy is 0.04 mm
- interchangeable jaws
- Base Plate with centered tapped hole

Clamping Force: **Up to 25 kN**

- **Material: Hardened alloy steel**

Standard Parts and Accessories
are an ideal addition to Lenzkes Clamps

Hardness of Bolts/Screws according to DIN ISO 898			
Hardness class	8.8	10.9	12.9
Tensile Strength N/mm ²	800	1000	1200
HRC Hardness	22-32	32-39	39-44

Hardness of Nuts according to DIN ISO 898			
Hardness class	8	10	12
Tensile Strength N/mm ²	800	1000	1200
HRC Hardness	20-27	25-32	32-39

Product Class: A and B
Surfaces: High-quality surface finish

Maintenance:
Fixing nuts and bolts that are used constantly should be regularly greased to increase life span of products.

Safety Instructions:

When used on vertical machine tables (injection moulding machines, tilt and turn tables) please note the Friction Force $F_r = \mu \times F_{sp}$.
 F_{sp} = Clamping Force, μ = Friction-Force (steel on steel $\mu = 0,2$).

Technical Data
for mechanical Clamps

Example:

Clamping Force $F_{sp} = 50 \text{ kN}$, Friction-Force = $0,2 \times 50 \text{ kN} = 10 \text{ kN}$ per Clamp.

A workpiece of $10 \text{ kN} = 1 \text{ ton}$ can be clamped on a vertical machine table with a Clamping Force F_{sp} of 50 kN .

Technical Data for mechanical Clamps

Clamping Frames S10 – S45

Numbers are based on average clamping heights and the centered position within the grooves of the frame S33–S45 only
