^{*1} The classification for FDA (CDRH) is implemented based on IEC60825-1 in accordance with the requirements of Laser Notice No.50.

^{*2} When the measurement target object is measured at the centre position of the setting distance.

When the measurement mode is set to the glass edge mode, a glass edge of C0.1 mm or more can be detected (Setting distance: 500 mm).

^{*3} When the light is shielded by half at the centre position of the setting distance. Vibration width when the average number of times is set to 16 and sampling is performed for 30 seconds. (When the analogue output is used, the margin of error of analogue output is added.)

^{*4} When the setting distance is 100 mm and light is shielded at 50 mm position from the receiver. Margin of error to the ideal line.

^{*5} When the setting distance is 100 mm and light is shielded by half at 50 mm position from the receiver.

^{*6} Excluding when the average number of times is set to [hsp].
