

PRODUCT NOTICE

SERIES 3000/XNX REMOTE MOUNT KIT
Change of Terminal Box

Regions Affected: **GLOBAL**

Dear Customers and Colleagues

The Remote Mount Kits for the Series 3000 and XNX (part numbers S3KRMK, S3KRMK45 and S3KRMK75) are used to allow a Series 3000 or XNX electrochemical sensor to be mounted some distance away from the transmitter. The kit features a die-cast terminal box fitted with the sensor socket and pre-wired with various lengths of cable.

We have been informed of a failure in the tool used to produce the die-cast terminal box and as a result we will be producing this kit utilizing an alternative terminal box. This is effective immediately.

The alternative terminal box will be of identical material and construction. However there are some minor dimensional differences between the old and new parts. The detailed dimensional differences between the existing and replacement boxes are shown in the diagram below where the original dimension is shown in *italics*.

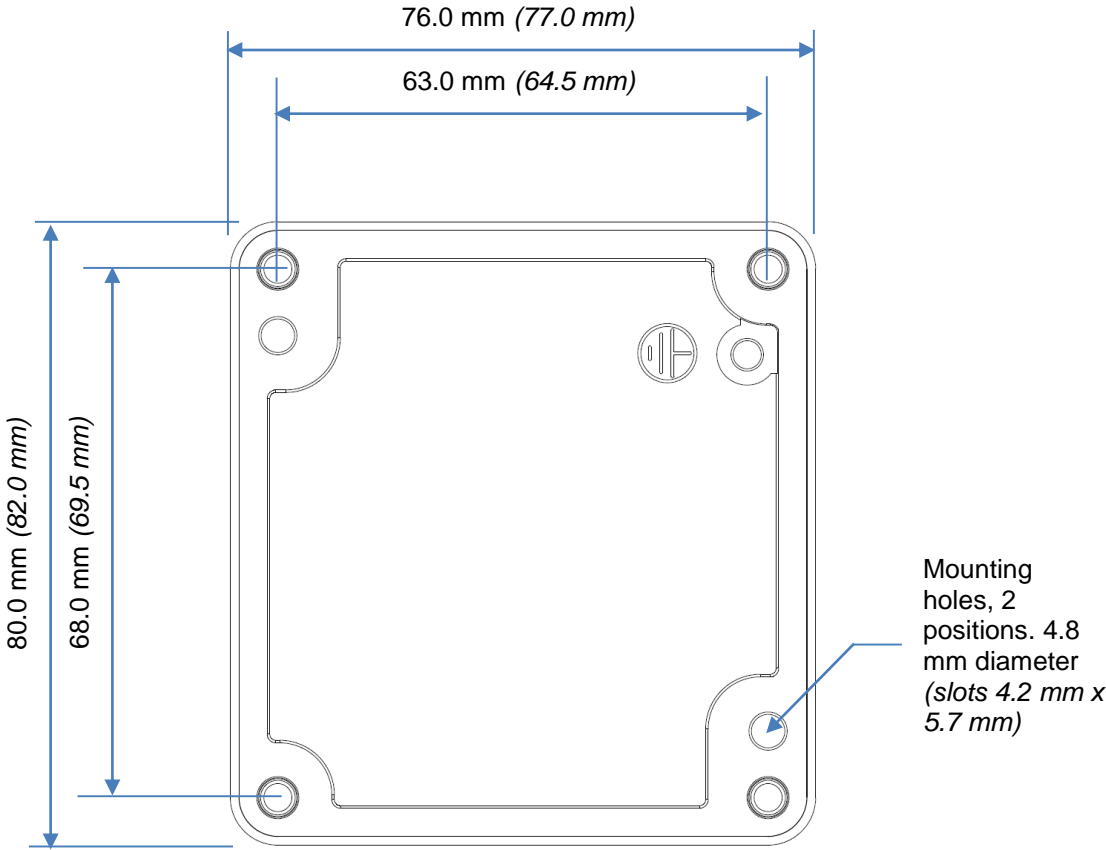

Figure 1 - Dimensional Differences of Terminal Box
