**Schemes** Note: These schemes are given as examples only, the designer must refer to the relevant safety standards for guidance

#### Wiring to category 1 conforming to EN 954-1/ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact and protection fuse to prevent shunting of the N/C contact, either by cable damage or by tampering.

(1) Signalling contact

#### Wiring to category 3 conforming to EN 954-1/ISO 13849-1

Example with 3-pole N/C + N/O + N/O contact with mixed redundancy of the contacts and the associated control relays. To activate K1, it is necessary to remove and re-insert the actuator when the supply is switched on.

H1: "actuator not inserted" indicator

#### Wiring to category 4 conforming to EN 954-1/ISO 13849-1. Wiring method used in conjunction with Preventa safety module (The guard switch should be used in conjunction with a safety limit switch to give electrical/mechanical redundancy)

##### Method for machines with quick rundown time (low inertia)

##### Method for machines with long rundown time (high inertia)

Locking or interlocking device based on the principle of redundancy and self-monitoring. The safety modules ensure these functions.

Locking of actuator and operation in positive mode associated with a safety module.

Interlocking device for actuator fitted on guard and zero speed detection.
